SANJAY SENTHIL	**CB.AI.U4AID23042**	Financial Model & DCF Engineer
HARI PRAKASH	**CB.AI.U4AID23047**	Monte Carlo Risk Simulation Lead
VIGNESH	**CB.AI.U4AID23057**	Portfolio Optimizer & ESG Modeler

Word-for-Word Final Presentation Script (3-Minute Live Demo)

Phase 1: Project Overview & Motivation (30 Seconds)

■ **Action on Screen:** Show Header and Title on your live deployed Streamlit web application.

> ***What to Say:*** *"Good morning, Sir. For our Final End-Semester Review, our project is titled Capital Budgeting, Infrastructure Project Valuation & Clean Energy Portfolio Optimizer. When investing ■250 Crores into utility-scale clean infrastructure, CFOs and commercial banks need to verify: Will 20 years of electricity sales beat our 8% cost of capital, can we safely service our bank loans, how do carbon credits expand revenue, and how can we optimize our renewable asset portfolio across Solar, Wind, and Batteries? We built this full-stack quantitative platform to answer these questions."*

Phase 2: Analysis 1 — DCF Valuation & Bank Debt DSCR (45 Seconds)

■ **Action on Screen:** Click on Tab 1, point out the top Scorecard metrics (NPV, IRR, LCOE, Min DSCR), then show the Waterfall chart.

> ***What to Say:*** *"In Tab 1, we implement our Deterministic Valuation and Bank Debt Financing model. For our Rajasthan 100MW Solar Park: Our Net Present Value is +■275.50 Crores, our IRR is 18.52% (beating the 8% WACC hurdle by +10.52%), our Levelized Cost (LCOE) is ■1.99 per unit against a ■3.85 PPA tariff, and the initial construction debt is fully paid back in 7 Years. Furthermore, our project finance module models 70:30 debt-to-equity financing: our minimum DSCR is 1.54x, well above the 1.30x banking benchmark, proving the project is fully bankable with zero default risk."*

Phase 3: Analysis 2 — ESG Carbon Credit Monetization (30 Seconds)

■ **Action on Screen:** Click on Tab 2, show the Carbon Abatement metric and the stacked Revenue breakdown bar chart.

> ***What to Say:*** *"In Tab 2, we introduce our new ESG Carbon Offset module. Generating 180,000 MWh of clean electricity displaces 147,600 tonnes of CO2 from the coal-heavy Indian grid every year. Monetizing these carbon offsets at ■1,000 per tonne under India's Carbon Credit Trading Scheme injects an additional +■14.76 Crores per year in green revenue, expanding annual cash flows by +21.3% and elevating project IRR above 21%."*

Phase 4: Analysis 3 — Monte Carlo Risk Engine (30 Seconds)

■ **Action on Screen:** Click on Tab 3, point to the histogram and the 2D green/red sensitivity heatmap.

> ***What to Say:*** *"In Tab 3, we test market volatility through our 5,000-scenario Monte Carlo Risk Engine, simultaneously shocking electricity tariffs by ±15%, CapEx overruns up to +25%, and inflation. Our Probability of Loss is 0.00%, and our 95% Value-at-Risk is +■152.80 Crores, meaning even in the worst 5% market disaster, the project generates over ■152 Crores in profit. The 2D heatmap on the right maps out our break-even frontier across interest rates and tariffs."*

Phase 5: Analysis 4 — Multi-Asset Portfolio Optimizer (45 Seconds)

■ **Action on Screen:** Click on Tab 4, adjust the allocation sliders, and point to the Donut Chart and Markowitz Efficient Frontier curve.

> ***What to Say:*** *"In Tab 4, we showcase our major final-review innovation: a Multi-Asset Clean Energy Portfolio Optimizer implementing Markowitz Modern Portfolio Theory. Because Solar generates during the day while Wind peaks at night and during monsoons, their negative correlation (-0.25) provides powerful diversification. Combining 45% Solar, 25% Wind, 20% Hybrid BESS Storage, and 10% Pumped Hydro compresses portfolio risk down to 6.85% and produces an optimal Sharpe ratio of 1.48. The scatter plot visualizes the complete Markowitz Efficient Frontier across 2,000 portfolio combinations."*

Phase 6: Conclusion & Executive Recommendation (15 Seconds)

■ **Action on Screen:** Show Tab 6 (Executive Memo) and conclude.

> ***What to Say:*** *"Finally, Tab 6 synthesizes all calculations into an automated Board Investment Memo recommending investment approval. Our system provides institutional CFOs with an end-to-end quantitative decision suite from project appraisal to portfolio management. Thank you, Sir, we are happy to take questions!"*
